

VOLVO CONSTRUCTION EQUIPMENT

VOLVO OIL ANALYSIS

MORE CARE. BUILT IN.

TRUST VOLVO OIL ANALYSIS TO INCREASE YOUR PROFIT

High uptime is what counts when you want to generate profit. With Volvo Oil Analysis you get an unbeatable tool, making it possible for you to plan maintenance as well as reduce the risk of unplanned downtime and expensive repairs.

Simply put, the Oil Analysis is a thorough "health check-up" of the machine's vital systems with analysis of oils in the engine, transmission, hydraulic system, axles and brakes as well as coolant and fuel on request. The Oil Analysis provides early warnings, giving you time to replace components before they cause problems and subsequent damage.

Only the Volvo laboratories have the full knowledge of the Volvo machines and can therefore interpret the results of the analyses and provide recommendations on how to act upon the results better than any other laboratories.

Make sure to perform regular analyses in order to get a history of several oil analyses. This will make it possible for you to see trends.

Easy, fast, and clear

Volvo Oil Analysis is performed in three steps.

■ Sampling

The necessary samples are drawn and are then sent to one of the Volvo laboratories.

■ Analysis

The Volvo laboratories have state-of-the art, advanced diagnostic equipment as well as experienced and qualified personnel. They analyze the samples and collect a vast amount of information, water/coolant content, viscosity, fuel, impurities, quantity of metal particles, and more.

■ Diagnosis

The thorough diagnosis is immediately available on a web site. The diagnosis provides direct action recommendations, so that critical situations can be avoided.
