

VOLVO CONSTRUCTION EQUIPMENT

FACTORY REMANUFACTURED COMPONENTS

WITH WARRANTY

VOLVO

Good value for your money

- The components are always modified to the latest version, including all technical improvements.
- The value of a factory remanufactured component can only be compared to the price of a new component, never with the costs of a repair or a simple reconditioning.
- Factory remanufactured components can be recycled and used several times in an environmentally friendly cycle.

Availability

- We guarantee fast and reliable delivery of factory remanufactured components.
- The factory remanufactured component you need will be available from your Volvo dealer via our efficient transport network.
- Order a component at the first sign of a problem and leave the defective component with Volvo for factory remanufacturing.

Quality

- The quality of a factory remanufactured component meets all the standards that we demand of a new component.
- A factory remanufactured component goes through the same quality control as a new component.
- Every component's damaged and worn parts are replaced using genuine Volvo parts. The component is then subjected to an extensive test program which results in a test protocol, showing that the component meets Volvo Construction Equipment's strict quality requirements.

The same quality as a new one, but at a lower price

Our factory remanufactured components give exactly the same quality, service life and warranty as new ones, but at a lower price. They minimize downtime to always give you the highest possible production.

Factory Remanufactured Components
