

MOBILITY SERVICES**GLOBAL
DIAL-UP**

Providing a common, global solution for dialling in to Volvo

With our Global Dial-up solution, Volvo IT provides a common way to dial in to the Internet and access the Volvo Corporate Network quickly, easily, and cost effectively from wherever you are travelling- worldwide. As Global Dial-up is utilized with Secure Connect Services (SCS) and your digipass, Volvo IT's new solution combines dial-up service with secure Internet access.

Volvo IT's Global Dial-up and SCS global solution will replace other current dial-in solutions, such as: MCS (Mobile Connect Services), SAD (Service Access Distant), 610/800, and CiscoNAS. Using the combination of Global Dial-up and SCS offers increased security, the opportunity for cost savings, and global standardization.

Connect with Ease on the Go

Global Dial-up includes a carrier and the telephone book software, "Access Manager". Access Manager needs to be installed on your PC before you can begin using Global Dial-up. Access Manager makes it possible for you to choose a specific telephone number to dial from a certain city or country.

Access on the go is easy; the phonebook is updated automatically every time you are connected and when new telephone numbers are available. It can be tuned for your specific needs, so that you can add and remove numbers based on your travel requirements. A flexible tool, Access Manager can

be used with ADSL, Analog Telephone, a GSM phone, or ISDN.

A Secure Way to Dial in to Volvo

Using SCS, you can be assured that your dial-in session will be protected; connecting with Global Dial-up also requires that you use Secure Connect Services (SCS) to access the Volvo Corporate Intranet.

Using SCS with Global Dial-up allows for encrypted communication and protects the flow of network traffic. After dialling in to the network with Global Dial-up and activating SCS and authenticating with your digipass, all traffic will be secured. With Global Dial-up's global reach, you can access a secure, encrypted connection at over 3500 locations.

Cost Saving Opportunities

Facilitating user administration, Global Dial-up provides access to one, global Internet provider with a presence in over 140 countries. Taking advantage of a global offering and working with a common provider presents the opportunity for cost savings.

Cost savings can also be realized in the area of connection surcharges. With Global Dial-up, there is a reduction in the surcharge for toll-free connections. As the service is a global offering, there is no surcharge for international calls. In addition, the rates per hour should be lower with Global Dial-up than those offered by most of Volvo's current, dial-in services.

Restrictions

Global Dial-up is not for use when you are connected to the Internet via broadband; Global Dial-up is only a dial-up solution used to connect to specific Volvo access points. When you have access to broadband services, SCS and authentication with your digipass are the only products needed to connect to the Volvo Corporate Intranet.

Cost

There is no initial cost for turning on the Global Dial-up service. The Global Dial-up price structure is based on usage cost, which includes the number of minutes a user is connected. Support and User Administration can be added to this service if requested for an additional cost per hour.

As Global Dial-up requires the use of SCS and digipass, the cost of these products must be considered in the overall cost of the Global Dial-up service. There is a monthly cost for SCS, which is charged per user. SCS can be used for other purposes, such as broadband access.

Need Additional Information?

Contact your Volvo IT Account Manager if you have questions about Volvo IT's Global Dial-up service offering.

Requirements

System Requirements

- Microsoft® Windows® 98, 2000 Professional, NT, Windows Millennium, or Windows XP
